

PDF Toolbox

Official User Guide & Documentation

Version: 1.2.0

Developer: Louro Devs

1. Introduction

Welcome to the PDF Toolbox. This application is a professional, standalone desktop utility engineered for the precise structural manipulation of PDF documents.

Designed with a focus on data integrity and workflow efficiency, this toolbox allows you to combine multiple documents into a single contiguous file or visually extract specific pages into isolated files without relying on external cloud services.

2. Interface Overview

The application is divided into two primary workspaces, accessible via the navigation tabs at the top of the window:

- **Merge PDFs:** Dedicated to concatenating (stitching together) multiple independent PDF files.
- **Split PDF:** Dedicated to cracking open a single PDF, viewing its internal pages, and extracting specific sections.

Color-Coded Actions:

To ensure operational safety and speed, buttons are color-coded:

- **Green Buttons:** Input actions (Loading files).
- **Blue Buttons:** Primary execution actions (Merging, Splitting).
- **Red Buttons:** Destructive actions (Removing files, Clearing queues).

3. Module 1: Merging Documents

The Merge module allows you to take multiple PDF files and bind them together in a specific sequence.

Step-by-Step Instructions:

1. **Import Files:** * Drag and drop your PDF files directly from your computer into the center of the Merge screen.

PDF Toolbox

- *Alternatively:* Click the green **Add Files...** button to open your system file browser and select them.
- 2. **Arrange the Sequence:** * Click on any file in the list to highlight it.
 - Rearrange the exact order you want them stitched together by **dragging the files up and down with your mouse**, or by selecting a file and using the **Move Up (↑)** and **Move Down (↓)** buttons.
- 3. **Remove Mistakes:** * If you loaded the wrong file, highlight it and click the red **Remove Selected** button.
- 4. **Execute the Merge:** * Click the blue **Merge and Save!** button at the bottom.
 - Choose where you want to save the final document.
 - Upon completion, a success window will appear giving you the option to instantly open the newly created file.

4. Module 2: Splitting & Extracting Pages

The Split module provides a high-fidelity visual grid, allowing you to selectively pull pages out of a larger document.

Step-by-Step Instructions:

- 5. **Load the Target Document:**
 - Drag and drop a single PDF directly onto the screen, or click the green **Select PDF to Split...** button.
 - The application will process the document and instantly generate visual thumbnails for every page.
- 6. **Select Pages for Extraction:**
 - Click on the thumbnails you wish to extract. Selected pages will be highlighted.
 - You can hold down **Cmd** (Mac) or **Ctrl** (Windows) while clicking to select multiple specific pages.
 - Use the quick-action buttons above the grid to **Select All**, **Clear Selection**, or **Invert Selection**.
- 7. **Choose the Output Scenario:**
 - Look at the radio buttons at the bottom of the screen.
 - **Extract to Single PDF:** This will take all highlighted pages and stitch them into *one* new PDF document.
 - **Split into Separate PDFs:** This will take every highlighted page and export them as *individual* PDF files into a folder of your choice.
- 8. **Execute the Extraction:**
 - Click the blue **Split into Single Pages!** button.

- If extraction is successful, a prompt will allow you to instantly open the output file or destination folder.

5. Module 3: Word to PDF Conversion

The Word to PDF module allows you to convert Microsoft Word documents (**.doc**, **.docx**) into PDFs with precision. It utilizes the same high-fidelity visual grid as the Split module, allowing you to convert the entire document or extract specific pages on the fly while perfectly preserving your backgrounds and formatting.

Step-by-Step Instructions:

1. Load the Target Document:

- Drag and drop a single Word document directly into the application, or click the blue **Select Word Doc...** button.
- The application will perform a rapid background conversion and instantly generate visual thumbnails for every page of your document.

2. Select Pages for Conversion:

- Click on the thumbnails you wish to convert. Selected pages will be highlighted.
- You can hold down **Cmd** (Mac) or **Ctrl** (Windows) while clicking to select multiple specific pages.
- Use the quick-action buttons above the grid to **Select All**, **Clear**, or **Invert** your selection.

3. Choose the Output Scenario:

- Look at the radio buttons at the bottom of the screen.
- **Convert to Single PDF:** This will take all highlighted Word pages and stitch them into one unified PDF document.
- **Convert to Separate PDFs:** This will take every highlighted page and export them as individual PDF files into a folder of your choice. (*Note: Files will be automatically named using a clean **filename-number.pdf** convention*).

4. Execute the Conversion:

- Click the green **Convert to PDF!** button.
- If the conversion is successful, a prompt will appear allowing you to instantly open the output file or destination folder to review your new documents.

6. Advanced Features & Quality of Life

- **Memory State Persistence:** The Toolbox remembers the last folder directory you worked in. You will not have to repeatedly navigate from your root hard drive for every single action.
- **Batch Drag-and-Drop:** You can select dozens of PDFs in your system file browser and drag them into the Merge queue simultaneously; the application will process the entire batch instantly.
- **Accidental Clear Protection:** Clicking the red **Clear File** button on the Split tab triggers a secondary confirmation dialog to prevent accidental data loss of your loaded document and selections.
